Reasons For Allowance:

1. The instant claims are allowable over the closest prior art, Taylor (WO 96/08532), Schramm et al. (WO 2003/020821), Saxton (US 5,032,632), for the following reasons.
2. Taylor teaches a method of stabilizing a polyethylene material against degradation. Taylor teaches that antioxidants, including Irganox 1010 and 1076 are used alone and in combination to provide antioxidant properties and a stabilizing effect. Taylor further teaches the concentrations required by Applicants. However Taylor does not teach Ethanox 330 at all, much less within the ranges claimed by Applicants. Taylor also does not teach the unexpected results presented by Applicants in the Dr. Oliphant Declaration. Taylor does not provide any motivation or teaching which would suggest using Ethanox 330 in combination with their invention.
3. Schramm et al. teach water pipes comprised of interpolymer of ethylene alpha olefin with the required densities. Schramm further teaches the use of antioxidants, however they are silent with regards to the instantly required oxidants in the instantly required concentrations and do not provide any direction or motivation that would lead one of ordinary skill in the art at the time of the invention to use the required antioxidants in the required concentrations nor does the Schramm et al. reference teach the unexpected properties presented in the Dr. Oliphant declaration.
4. Saxton et al. teach the specific combination of antioxidants as required in the instant claims, however Saxton et al. teach that the antioxidants are included in an ethylene vinyl alcohol polymer and not polyethylene, further the Baker declaration teaches that one of ordinary skill in the art would not combine ethylene vinyl alcohol with

polyethylene due to the polymers are immiscible and adding ethylene vinyl alcohol would materially change the characteristics of the present invention.

5. As such the closest prior art teaches water pipes comprising interpolymers of polyethylene with antioxidants but not the specific antioxidants in the specific concentrations as required. The prior art does teach one aspect of the antioxidant combination of the instant claims but is silent with regards to the Ethanox 330 aspect of the combination. The prior art teaches the combined antioxidant combination in pipes, however the pipes are made out of ethylene vinyl alcohol and not interpolymer polyethylene. Further there is no motivation to combine the references.
6. Thus it is clear that Schramm et al., Saxton et al. and Taylor neither alone nor in combination teach the instant claims.

As such the claims are passed to issue.
